

Test assignment for senior front-end developer

As a test assignment could you please implement a simple to-do list application called "pawaTask" that keeps track of your time.

User should be able to do the following:

1. Add a new task to the list
2. Edit existing task
3. Add comments to the task

Task should have the following properties:

- Title
- Description
- To-do date
- Priority: Low, Medium, High
- Comments

Please use the following technologies for your assignment:

- Vue.js 2+ (frontend)
- Vuex

Keep in mind the following things:

Offer clean user interfaces.

It's not allowed to use a CSS framework (we want to see how you write CSS).

Site is expected to be used on desktop and mobile.

Make sure your code is well structured and reusable.

Explain how to set up and run your application.

Bonus: As the task is minimalist and simple, feel free to add to it.

Use github for version control.

Could you please complete this assignment within 5 working days.

Example:

PawaTask

Add a new task

You do not have any tasks [add a new task](#)
